GIST (Gwangju Institute of Science and Technology) and five leading organizations in the Honam and Chungbuk regions successfully hosted the '2021 Preliminary Start-up Package Support Project Seminar for Finance and Credit Education,' which was co-hosted by the Gwangju and Jeonnam Small and Medium Venture Business Administrations.

In particular, GIST specializes in the field of preliminary start-up packages, focusing on technology using artificial intelligence (AI), evaluating the excellence of business items and commercialization potential, and providing material and human resources to commercialize start-ups.

The training was well-received and included ▲ financial education and credit management ▲ funding using guarantees ▲ education on using the online corporate systems ▲ specifying the start-up financing method.

GIST Business Incubator Director Byeong-kwan Cho said, "Even though it is a difficult time to start a business than ever before, we will serve as a guide for successful start-ups so that prospective entrepreneurs can quickly succeed in starting a business by reducing trial and error."

Meanwhile, personnel appointments, labor education, and mentoring for the 2021 preliminary start-up package seminar will be held in mid-October as follow-up training. The program covers the HR management system, labor law system and composition, the four major insurances, experiences of senior companies, and sharing employee training know-how.
